CAROLINE ROHLAND

DECORATIVE PLANTS WOODSTOCK, N. Y.

“Living Stones” or
Stemless Mesembryanthema

From the dry, sunny deserts of South Africa come these strange, fantastic plants. There they grow among the colored stones and pebbles resembling them so closely as to be almost invisible. Thro' the necessity to protect themselves from browsing animals, ostriches, or perhaps even keen eyed plant explorers, they have created for themselves the most amazing variety of forms and colors. Many are comparatively recent discoveries. For the collector there is no more interesting hobby as there are many strange kinds now obtainable.

I take pleasure in offering a limited quantity of the following choice specimens:

Lithops (Stone Face) fulleri \$1.00

Delicate dove-grey with a slightly violet tint. Soft pattern of light brown on top of leaves or lobes. Flowers a dazzling white.

Lithops kiubisensus \$1.00

New lobes a rich terra cotta red emerging from older lobes of grey lavender. Interesting markings.

Faucaria tigrina (Tigers Jaw) \$.75

Closely allied to "Living Stones". It protects itself by assuming a ferocious look. The leaves resembling a menacing mouth full of teeth.

also

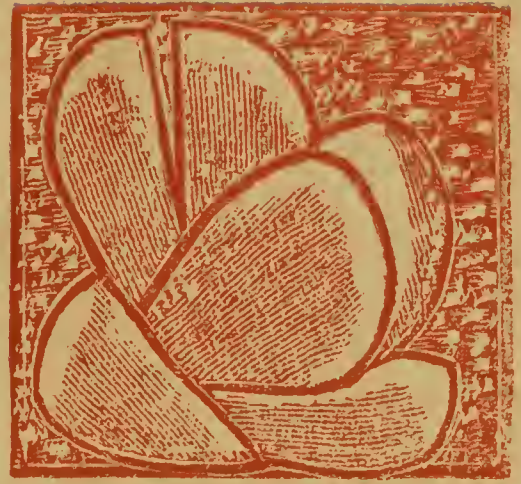

Lithops terricolor \$1.00 Lithops mundti \$1.00

Strange earth colored Curious flat shapes of soft forms varying slightly in brown tinge - color -

Dinteranthus puberulous

\$1.50

Very rare. Beautifully formed cone shaped lobes. Speckled and flushed with silvery rose.

Lapidaria Margaretae

\$1.00

One of the most charming shapes of all. Resembling a piece of beautifully carved sculpture. Ivory grey, suffused with pink - flowers a lovely yellow. Last for weeks.

Rimaria heathii

\$1.00

Grows in amusing groups of different sized green pebble shapes.

also

Argyroderma schlechteri

\$1.00

A perfectly formed silvery green rounded shape. As tho' cut in half with a sharp knife. From this opening grow the new lobes and from the center of these the flower.

The culture of "Living Stones" is very simple but certain rules must be followed to assure success. My plants are all over three years old. If given proper attention well established plants should bloom by fall or winter. Better results are obtained by planting them in groups. Either a large pot or a window box full is an extraordinary sight.

Special directions with each order.
